

WASHING INSTRUCTIONS

DUVETS & OVERSIZED PILLOWS

All our natural duvets have been designed for domestic washing. For best results, have your investment duvet laundered professionally. Otherwise, use an industrial size washing machine with a large drum capacity (+15kgs).

Only use a 'mild' detergents (baby safe).

DO NOT DRY CLEAN unless stated otherwise on the product label. Chemicals often associated with dry cleaning may damage delicate down fills. This will help to extend the natural life of your duvet. Do not over load the wash drum as this will reduce the efficiency of your wash and rinse cycles.

Water temperature of 60° centigrade will kill any unwanted bacteria that has accumulated between washes (ie... body oils, perspiration and surface dust mites). Use wool programme to minimize shrinkage.

Down doesn't react kindly to humidity. Therefore, duvets 'MUST' be thoroughly and completely tumble dried . To help speed up the drying process and renew the loft of the fill, place a couple of clean tennis balls (4-8) in the dryer.
