

WASHING INSTRUCTIONS

FEATHERBEDS

Although our 'European Featherbed' is made up of a natural fill encased in 100% cotton fabric, they are merely too large and heavy to have laundered. However, stains can be spot treated with a sponge or soft damp cloth along with a mild baby-safe detergent. Rinse thoroughly. Treated areas must be left to dry thoroughly before re-dressing the bed.

During an 8 hour period of sleep, our bodies produce up to half a pint of body moisture. To prevent this moisture as well as other body fluids (natural oils ..etc..) from penetrating into the featherbed, we strongly recommend that you protect your investment with a 'PROTEX-Plus Featherbed Protector'. This natural protector is a quiet and breathable moisture barrier that will help preserve the natural full loft and comfort of your featherbed.

It is always a healthy practice to allow your featherbed a breath of fresh air once in a while. When it's time to change your bed linen, strip the featherbed bed completely, plump it up, open the window and let it air for a couple of hours. These suggestions will help extend the natural life of your featherbed investment.
